- Hand Grip
  - Abnormal = unilateral weakness
- Blood Glucose
  - Ensure normal range
- 2. Does the patient normally live at home, or could they manage for 1 week without assistance of another person?
  - Patients with moderate or severe dementia, or living in a high-level care facility are excluded
- 3. Is the patient normally able to walk without a gait aid or the assistance of another person? (Please Note: This is Ambulance Victoria Criteria and assessment by Monash Health staff will form part of the patients overall clinical assessment)
  - Patients unable to walk without assistance are excluded
- 4. Consider symptom onset time
  - Within 6 hours of known symptom onset
    - Any of the above MASS symptoms, including patients with resolving or transient symptoms
  - From 6 to 24 hours with persistent, non-resolving symptoms (patients who wake up with symptoms are eligible if <24 hours from last seen well)
    - New arm weakness
    - Cortical neurological symptoms
      - Dysphasia or aphasia
      - Hemianopia
      - Visual or tactile neglect
      - Apraxia

## PART B

#### **CODE STROKE STAND DOWN**

- The Senior Emergency Department Doctor or the Stroke Consultant/Registrar can decide if at any time it is felt the patient is not suitable for tissue plasminogen activator or clot retrieval, the Code Stroke is stood down.
- Notify the Stroke Team to Stand Down: send Group Page 4444 "Code Stroke stand down".

#### THE CODE STROKE TEAM WILL:

- Manage all patients who present with stroke and need intervention, and arrange admission by speaking to the inpatient stroke consultant
- Manage all patients who present with stroke but are not eligible for intervention, and arrange admission by speaking to the inpatient stroke consultant
- Refer all neurological patients to the inpatient Neurology team (i.e. seizure, migraines)
- Facilitate discharge of all TIA patients, or mimics such as migraine if they are well enough to go home by referring to care co-ordinator
- Refer all neurosurgical patients directly to neurosurgery
- Discuss with ED doctor allocated to patient regarding undifferentiated/unstable patients for further management, this may include a likely diagnosis (e.g. CNS infection, delirium etc) and recommendation of further investigations.
